**Subject:** cement casing

There is no question about it water is one of our most valuable resources. I therefore believe cement casing rules should be stronger, better monitored, and regulated to protect the citizens and Texas greatest natural resource, water.

Industry can and must do it right. Better and stronger cement casing. Where there is non-compliance by industry the RRC must impose the strongest fines and penalties possible so this becomes a priority for the drilling industry. Rushed economic development should not take the place of caution and oversight.
